

- LEGEND**
- Perimeter fence + intrusion detection
  - ANPR vehicle gate
  - ◊ Mantrap
  - ①-⑤ Access-control layer 1-5
  - > CCTV camera + coverage

- NOTES**
- Five layers of access control run from the perimeter to the white space (ER §5) — see the layer schedule, right.
  - Single vehicle entrance from Tikkurilantie, ANPR-gated, shared with an operating logistics neighbour.
  - CCTV covers the perimeter, gate, all building entrances and the generator compound, with 90-day retention (ER §5).
  - Access control is integrated with the Tenant's credentialing at handover of each Section (ER §5); the Tenant's credential database is Employer-supplied.
  - Mantrap at main reception prevents tailgating between the public gatehouse and the controlled campus interior.
  - Perimeter fence carries an intrusion-detection system (laser wire / microwave) reporting to the site security control room in the gatehouse.

| FIVE-LAYER ACCESS CONTROL — PERIMETER TO WHITE SPACE |                     |                                             |
|------------------------------------------------------|---------------------|---------------------------------------------|
| LAYER                                                | ZONE                | CONTROL                                     |
| 1                                                    | Perimeter           | Fence line + intrusion detection            |
| 2                                                    | Vehicle / gatehouse | ANPR gate + gatehouse security control room |
| 3                                                    | Building entrance   | Mantrap at reception, card access           |
| 4                                                    | Hall corridor       | Card + PIN, addressable per hall            |
| 5                                                    | White space         | Card + biometric, addressable per hall      |
